

VERTICAL MIXERS

Integrating Plastic Technologies Since 1965

M Series

The floor-standing mixers of the “M” series have been designed to mix plastic granules such as master-batch, additives, regrind material.

These mixers have capacities ranging from 120 to 330 liters. Thanks to their small dimensions and easy handling with wheels, they can be easily placed beside machines. A hinged cover on top of the machine makes it easy to manually load material.

A suction probe allows unloading the material that has been mixed.

Technical Specifications:

- Loading cover with safety switch.
- Bottom discharge slide gate with safety switch.
- “Fountain-type” mixing system with a ducted mixing screw controlled by a three-phase gear-motor.
- Microprocessor-based control with programmable timer.
- Probe holder pipe for pneumatic suction of the blend.
